

GESPER

GUARANTEED ENERGY SAVINGS

The **GESPER** is an innovative, environmentally friendly electronic device that provides businesses and homeowners the following benefits:

- Reduction in kilowatt hours consumed
- Lower electric bills
- Whole premises surge protection
- Whole premises lightning protection
- Great efficiency and longer-life of motors and electrical devices

We are proud of our products and stand behind them. Every **GESPER** unit comes with...

- Guaranteed savings of ten percent (10%) of kWh
- Five- (5) year limited warranty
- \$2,000,000 product liability policy
- A six- (6) month money back guarantee

GESPER units were first manufactured and installed commercially in 1992, and have a ten (10) year track record of protecting residential and commercial properties from power surges and the effects of lightning in the vicinity of the properties. Documented savings in kilowatt hours used have ranged from 10% to in excess of 35%. These savings have been reflected on the electric bills of residences and businesses in many locations across the country.

The **GESPER** actually reduces the amount of electricity drawn from your power company. At the same time, they deliver a clean, even flow of energy to your home or building. The units remove the spikes and surges that cause additional wear and destruction to your equipment.

A basic description: Currently, you draw 2.7 amps from the power company to create 2.5 amps for your location (due to voltage imbalance and harmonics-reverse voltage). With the **GESPER**, you draw 2.0 amps (line side) and maintain 2.5 amps (load side) in to your home or office. The other **GESPER** benefits include more efficient motors, lights and electrical devices.
